Patent No. 6566492

GENERAL INFORMATION:

APPLICANT: EYE, David

TITLE OF INVENTION: CARTILAGE RESORPTION ASSAYS

FILE REFERENCE: WROS.1-142671

CURRENT APPLICATION NUMBER: US/10/073,679

CURRENT FILING DATE: 2002-02-11

PRIOR FILING DATE: 1999-06-30

PRIOR FILING DATE: 1999-06-20

PRIOR FILING DATE: 1999-06-20

PRIOR FILING DATE: 1999-06-20

PRIOR PLING DATE: 1999-06-20

PRIOR PLING DATE: 1999-06-17

PRIOR PLING DATE: 1999-06-17

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Maximum DB seq length: 200000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

SwissProt\_42:\* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    "Primary structure and oxygen-binding properties of the hemoglobin from the lesser hedgehog tenrec (Echinops telfairi, Zalambdodonta). Bydence for phylogenetic isolation.";
Biol. Chem. Hoppe-Seyler 372:975-98(1991).
-!-FUNCTION: Involved in oxygen transport from the lung to the various peripheral tissues.
-!-SUBUNIT: Heterotteramer of two alpha chains and two beta chains.
Two external cysteine residues at beta-16 and beta-52 cause reversible polymerization to octamers and most likely irreversible formation of higher polymers.
                                                                                                                                                                                               MEDLINE=99039499; PubMed=9823893; Andersson J.O., Andersson S.G.E., Zomorodipour A., Andersson J.O., Sicheritz-Ponten T., Alsmark U.C.M., Podowski R.M., Naeslund A.K., Eriksson A.-S., Winkler H.H., Kurland C.G.; "The genome sequence of Rickettsia prowazekii and the origin of mitochondria.";

Biophys. Acta 1130:218-220(1992).
-I- FUNCTION: This is a minor early embryonic beta chain.
-i- SUBUNIT: Heterotetramer of two alpha chains and two beta chains.
-i- SIMILARITY: Belongs to the globin family.
                                                                                                                                                                                                                                                                                       Bukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

--- SUBCELLULAR LOCATION: Extracellular.
--- INDUCTION: Not found in healthy tissues, but accumulates to high levels in the extracellular compartment of leaves in response to pathogen infection or treatment with salicylic acid.
--- PTM: The N-terminus is blocked.
--- SIMILARITY: Belongs to family 17 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Proc. Natl. Acad. Sci. U.S.A. 86:2673-2677(1989).
-!- FUNCTION: Implicated in the defense of plants against pathogens.
-!- CATALYTIC ACTIVITY: Hydrolysis of 1,3-beta-D-glucosidic linkages
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    "Characterization of vacuolar and extracellular beta(1,3)-glucanases of tobacco: evidence for a strictly compartmentalized plant defense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Leptospira interrogans.

Proc. Natl. Acad. Sci. U.S.A. 99:14422-14427(2002).

-!- FUNCTION: Catalyzes a salvage reaction resulting in the formation of AMP, that is energically less costly than de novo synthesis.

-!- CATALYTIC ACTIVITY: AMP + diphosphate = adenine + 5-phospho-alpha-
                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pram; Frvasov, ...

-!- FUNCTION: Seems to enhance the formation and/or stability of norovalant complexes between the trp repressor protein and operator-bearing DNA (By similarity).

-!- COFACTOR: Binds 1 FMN per monomer (By similarity).

-!- SIMILARITY: Belongs to the wrbA family.

-!- SIMILARITY: Contains 1 flavodoxin-like domain.

-!- CAUTION: WrbA is interrupted by the insertion of the prophage VT2-Sakai between positions 17 and 18.

Bacteriol. 177:3045-3051(1995).

-!- FUNCTION: Needed for both DNA binding and transport. It is absolutely required for the uptake of transforming DNA but not for binding. Its role in binding may be indirect.
-!- SUBCELLULAR LOCATION: Type II membrane protein. Inner membrane.
-!- SUBCELLULAR: TO E.COLI YBAV AND H.INFLUENZAE H11008.

R. SHICKELTIC ACTIVITY: Endomucleolytic Cleavage to 5.-

- FUNCTION: Digest Standard Librarity.

- Instructural R. Locations I DRBM (double-stranded RNA-binding) domain.

- C. C. Tibosomal RNA preductions of some markas (by similarity).

- SHULMKITY: Contains I RNase III domain.

- SHULMKITY: Contains I RNase III domain.

- SHULMKITY: Contains I RNase III domain.

- SHULMKITY: Contains I Rnase III domain.

- SHULMKITY: Contains I Rnase III domain.
